iWAMS

Control your MFPs,
your costs and security

Different MFP users, one solution

Are you concerned about costs and keeping control of your print devices? Canon iWAMS (iW Access Management System) lets you decide who accesses what, where and when across your network.

Prevent waste by restricting access to colour printing to only those users that require it. Allow web access to only those that need it. Prevent sensitive documents being scanned or faxed indiscriminately. iWAMS ensures cost-control and security to deliver maximum value.

Permission allowed/denied

iWAMS lets you create profiles for every MFP user: Power Users, Generic Users, Limited Users, Guests. They have all the access they need to perform their business function. No less but no more.

Scaleable solutions

You may be small now, but you're growing. Install iWAMS and reap the benefits both today and tomorrow. The iWAMS system can scale to meet the demands of the largest corporation with ease.

Set your permissions

Your IT administrator can define all profiles once and centrally. Permissions are preset for the four profiles but can be deleted and amended to suit your organisation's needs.

Monitor your costs

By seeing how and how often devices are being used, you can make informed decisions on where costs can be controlled and cut. As requirements change, it's simple to make updates and amendments.

ROI with iWAMS

When you control enterprise wide access to print, fax and web on your MFPs you take a big step to control expenditure and security. And it's so simple. Installing iWAMS will bring real cost control and security quickly.
